                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    as multiple sclerosis, connective tissue disease, rheumatoid arthritis, diabetes multiple sclerosis, connective tissue disease, rheumatoid arthritis, diabetes multius, allergic rhinitis, asthma and eczema, nervous system disorders such as Parkinson's disease, Alzheimer, disease, huntingron's chorea, amyotrophic lateral sclerosis, spinal muscular atrophy and Wernicke disease, inflammatory disorders such as nephritis, Crohn's disease, ischemaia-repertusion injury, shock, sepsis and inflammatory bowel disease. The sequences exhibit activity relating to angiogenesis, cell proliferation, cell differentiation, stem cell growth factor, activin or inhibin. Therefore they can be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, accidental damage or genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disorders. The sequences may also be used for regeneration of bone, cartilage, tendons and ligaments and in tissue repair and burn healing. Note: Some sequences for this patent did not form part of the printed specification, but were obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequences AAS44576-AAS44919 represent full-length polynucleotides and contig polynucleotides encoding polypeptides of the invention. The DNA and protein sequences are useful for the treatment, diagnosis and prevention of various types of disorder in a mammalian subject such as a human, dog, monkey, mouse, hamster or rat. The disorders include cancers such as leukaemia, lymphoma and neuroblastoma, autoimmune disorders such

                                                                                                                                                                                                                                                                                              .,
                                                                                                                                      The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal coding region. The PAX8-PPARgammal properties can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX887-PPARgammael polypeptide
                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New PAX8-PPARcl oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma

The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PARgammal, where the disorder is cancer, e.g. follioular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The
                                                                                                                                                                                                            subject having a disorder characterized by the presence of a PAX8-PPARgammal, where the disorder is cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents the nucleotide sequence including and surrounding the fusion juncture in the PAX8e9-PPARgammael DNA.

                                                                                                                                                                  0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an oncogene designated PAX8-PPARgammal that contains a PAX8 coding region fused to PPARgammal coding region. The PAX8-PPARgammal polypeptides can be expressed by standard recombinant methodology. A PPARgamma ligand or agent is useful for treating a subject having a disorder characterized by the presence of a PAX8-PPARgammal instruction of a cancer, e.g. follicular carcinoma. The PAX8-PPARgammal molecules are also useful for providing nucleotide and amino acid sequences useful for detecting the above disease. The present sequence represents a human PAX8e9-PPARgammael polypeptide
                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New PAX8-PPARc1 oncogene and oncoprotein, useful for detecting and treating certain tumors or cancers, e.g. follicular carcinoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PAX8-PPARgammal; oncogene; cytostatic; PAX8; PPARgammal; cancer; follicular carcinoma; PAX8e9-PPARgammael; human; ss.
represents a human PAX8e9(-exon 8)-PPARgammael
                                                                                                                                                                  0;

amino-acid sequence with a promoter downstream from the Gal 4 protein response sequence, as well as a Fas antigen membrane linking region and function expression region. Also described are: (i) a transformant coll containing both the plasmid DNA and effector protein encoding DNA; (ii) a method by using the transformant cells for screening agonists or antagonists or the intracellular receptor; and (iii) a similar method for screening intracellular receptor; and (iii) a similar method bor screening intracellular receptor agonists or antagonists in mouse fibroblast 1929 or human cancer cell Heia, with the receptor particularly being DPAR alpha, gamma or delta. The plasmid DNA and effector protein encoding DNA are used as active ingredient in drugs to treat cancer or autoimmune diseases, as is the transformant cells can also be applied in the detection of ligand of an intransclear receptor in a screening method for the intracellular receptor agonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                       The present invention describes plasmid DNA containing a DNA encoding an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           or antagonists, particularly in mouse fibroblast 1929 or human cancer cell HeLa with receptor being PPAR alpha, gamma or delta. The present sequence represents a PCR primer used in an example from the present

peroxisome proliferator activated receptors (PPAR) gammal and gamma2. The invention is useful for treating cancer and other disorders including excessive cell proliferation and viral infection. The invention is also directed to the use of PPAR gammal and gamma2 to identify compounds that are antiproliferative, antiviral and antitumour agents. The invention also relates to a method of treating cancer using a pharmaceutical composition comprising thiazolidinedione in an amount sufficient to modulate PPAR gammal and gamma2 activity. The present cDNA sequence encodes human peroxisome proliferator activated receptor (PPAR) gamma2 protein related to the invention.
                                                                                                            Human, peroxisome proliferator activated receptor gamma2, cytotoxic, antiproliferative, antiviral, cancer, cell proliferation, viral infection; pharmaceutical; thiazolidinedione; ss.
                                                                                Human peroxisome proliferator activated receptor (PPAR) gamma2 cDNA.

Sequence 1, Application US/0925392

Patent No. 6214850

GENERAL INFORMATION:
APPLICANT: Evans, Ronald M.
APPLICANT: Forman, Barry M.
TITLE OF INVENTION: MODULATORS OF PEROXISOME PROLIFERATOR
TITLE OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pretty, Schroeder, Brueggemann & Clark
STREET: 444 South Flower Street, Suite 2000
                                                                                    APPLICANT: Watson, James D
APPLICANT: Watson, James G
TITLE OF INVENTION: Polymucleotides, polypeptides expressed
TITLE OF INVENTION: by the polymucleotides and methods for their use.
FILE REFERENCE: 11000.103001
CURENT APPLICATION NUMBER: U$/09/724,864
CURENT APPLICATION NUMBER: U$. No. 6380362 60/171,678
PRIOR PILING DATE: 1999-12-23
NUMBER OF SEQ ID NOS: 72

Patent No. US2002016676A1

GENERAL INFORMATION:

APPLICANT: Fletcher, Jonathan A.

APPLICANT: Fletcher, Jonathan A.

TITLE OF INVENTION: PAX8-PPARgamma NUCLEIC ACID MOLECULES

TITLE OF INVENTION: AND POLYPEPTIDES AND USES THEREOF

TITLE OF INVENTION: AND POLYPEPTIDES AND USES THEREOF

TITLE OF INVENTION: AND POLYPEPTIDES AND USES THEREOF

CURRENT APPLICATION NUMBER: US/09/765,111A

PRIOR APPLICATION NUMBER: US 60/17,109

PRIOR PILLING DATE: 2000-01-20

PRIOR FILLING DATE: 2000-08-14

NUMBER OF SEQ ID NOS: 47

SOFTWARE: FastSEQ for Windows Version 3.0

/note="Vector: pBluescript II SK-; Site_1: EcoRI, Site_2.

Xhol; This library, constructed by John Davies and Jeffr.

MoDermott, combines cDNAs from CC-1690 cells grown to

mid-log phase in TAP (acetate-containing) medium in the
light, TAP medium in the dark, HS (minimal) medium in the
light, TAP medium in the dark, HS (minimal) medium in
ambient levels of CO2 and HS medium bubbled with 5% CO2.

PolyA mRNA was purified from each sample, pooled and cDNA
Sypthesized. The CDNA was directionally cloned into lambda
ZAP II (Extragene) in the EcoRI (s') and Xhol (s') sites.

PBRUESCRIPT II SK- plasmids were excised from the lambda
ZAP clones by superinfection with ExAssist (Stratagene)
phage. The library was normalized using method 4 described
in Bonaldo et al 1996) Genome Research 6: 791-806."

Constructed by John Davies and Jeffrey McDermoct, combines CDNAs from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light, TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda ZAP II (Extragene) in the BCORI (S') and XhoI (3') sites. pBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al 11996) Genome Research 6: 791-8066."

library; as subtracted library derived from the UI-R-C1
library, which is a subtracted library derived from the UI-R-C1
library, which is a subtracted library consisted of a
mixture of individually tagged normalized libraries
constructed from xat placenta, adult lung, brain, liver,
kidney, heart, spleen, ovary, muscle, 8, 12 and 18-day
embryo. The tag is a string of 3-5 nucleotides present
between the Not I site and the oligo-dT track which allows
identification of the library of origin of a clone within
the mixture. The subtracted library (UI-R-C2p) was
constructed as follows: PCR amplified oDNA inserts from
UI-R-C1 clones from which 3' ESTS had been derived was
used as a driver in a hybridization with the UI-R-C1
library in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library) was
purified by hydroxyapatite column chromatography,
converted to double-stranded circles and electroporated
library in the Stranded circles and electroporate the
UI-R-C2D library which procedure has been accommended to double the page of the pag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Email: msoares@blue.weeg.uiowa.edu

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Libraries using Random Activation of Gene Expression, Nature Biotechnology, in press. Note that even though the cell type indicated is HT1080, since a random activation method was used, these sequence tags are not necessarily expressed in HT1080 under normal circumstances."

The sequence contained an oligo-dr track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NoII site and the oligo-dr track served to verify it as a clone from the normalized rat cell line R337-5a library cDNA Library Preparation. M.B. Scarse Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this CDNA sequence: 1-38,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the Not I cloning site and dT18 stretch. RESULT 1	
HSPPARGAM	
LOCUS	HSPPARGAM 1766 bp mRNA linear PRI 21-AUG-1997
DEFINITION	H.sapiens mRNA for peroxisome proliferactor activated receptor
	gamma.
ACCESSION	X90563
VERSION	X90563.1 GI:1480099
KEYWORDS	peroxisome proliferator-activated receptor gamma.
SOURCE	Homo sapiens.
ORGANISM	Homo sapiens
	Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
	Mammalia, Butheria, Primates, Catarrhini, Hominidae, Homo.
REFERENCE	1 (bases 1 to 1766)
AUTHORS	Lambe, K.G. and Tugwood, J.D.
TITIE	A human beroxisome-proliferator-activated receptor-damma is
